Education

University of Massachusetts Amherst

May 2026

Bachelor & Master of Science in Computer Science

GPA: 3.9/4.0

- **Honors:** Chancellor Award Scholarship, Dean's List, Outstanding Undergraduate Course Assistant Award
- **Coursework:** Data Structures, Operating Systems, Networking, Cloud Computing, Distributed Systems, Databases

Technical Skills

- **Languages:** Go, Python, TypeScript, JavaScript (ES6+), C, Java, C++, SQL
- **Frameworks:** Next.js, React, Node.js, Effect, .NET, FastAPI, Spring Boot, REST APIs, gRPC
- **Cloud & DevOps:** Vercel, AWS (Lambda, S3, EC2), PostgreSQL, Docker, Kubernetes, Jenkins, Linux
- **Development:** Distributed Systems, CI/CD, Observability, Debugging, Microservices, Agile, Git, Cursor,

Experiences

NetApp

San Jose, CA

Software Engineer Intern

May 2026 – Aug 2026

- **Technologies:** Python, PostgreSQL, Azure, REST APIs, Kubernetes, Docker, Kafka, CI/CD
- Engineered improvements to Azure NetApp Files' **CI/CD infrastructure** by automating test validation, diagnosing pipeline regressions, and reducing release risk for enterprise-scale cloud storage services
- Analyzed and resolved issues across distributed storage workflows, utilizing **Python, Kubernetes**, and **REST APIs** to improve service reliability, deployment consistency, and operational scalability
- Optimized a **REST** endpoint by extending request schema and **reduced the latency of fetching info by 40%**

UST

Aliso Viejo, CA

Software Engineer Intern

May. 2025 – Aug. 2025

- **Technologies:** Go, Python, AWS, gRPC, SQL, Terraform, Kafka, Kubernetes, Docker, Snowflake, Git
- Automated provisioning and lifecycle management of **EC2** with **CloudFormation** via Python, reducing deployment time by **40%** and eliminating error-prone manual steps
- Built and deployed **Go** microservices and **REST APIs** on **Kubernetes** to support **data-intensive workflows** across a distributed big-data platform
- Integrated Spark into backend service for high-throughput pipelines; automated AWS orchestration to cut compute costs
- Implemented end-to-end monitoring via **Prometheus + Grafana**, creating proactive alerting and instrumentation for core product flows to improve MTTR and observability in production

Schneider Electric

Boston, MA

Software Engineer Intern

Jan. 2024 - Jun. 2024

- **Technologies:** Python, TypeScript, Django, React, AWS, FastAPI, REST APIs, Redis, Docker, HTML, CSS, Figma
- Developed a **Django** backend to optimize bulk-messaging, enabling **100K+ messages simultaneously**
- Migrated invoice service to modern **TypeScript based services** on AWS, reducing latency by **12%** and implementing automated testing to ensure reliability across the full product lifecycle
- Designed & owned a gRPC endpoint to lazy fetch contents for Profile Dashboard, **used by 1M+ users**
- **Reduced vulnerability query latency by 50%** by optimizing the query execution and partitioning techniques

UMass College of Information and Computer Sciences

Amherst, MA

Undergraduate Course Assistant

Jan. 2022 - Dec 2023

- Hosted weekly office hours to help a class of **200+ students** develop **website and app** programming in JavaScript
- Guided **40+ students** through 9 laboratory sessions, covering key topics in task parallelism and synchronization

Projects

AI Inference Research | Python, PyTorch, REST, Docker, Kubernetes, PostgreSQL, Jenkins, GitLab CI

Jan. 2026

- Built **distributed LLM serving infrastructure** with **Kubernetes** and **gRPC**, supporting scalable, low-latency inference across multiple model replicas
- Developed automated **CI/CD** and model deployment pipelines for experimentation, validation, and production releases
- Improved inference throughput and system reliability through container orchestration, health monitoring, and fault-tolerant recovery mechanisms
